Waste Site Reclassification Form

Date Submitted: 8/26/2004	Operable Unit(s):	300-FF-2	Control Number: 2004-100
Originator: CR Webb	Waste Site ID:	300-29	
Phone: 373-5573	Type of Reclassific Rejected: No Action: Interim Closed Closed Out:	○ ⊙	
This form documents agreement among the parties listed below authorizing classification of the subject unit as rejected, closed-out, or no action and authorizing backfill of the site, if appropriate. Final removal from the NPL of no action or closed-out sites will occur at a future date.			
Description of current waste site condition:			
In 1980, soil from the 305-B berm was being removed and transported to the JA Jones Pit #1. Radiologically contaminated pieces of asphalt were discovered on the south end of the berm and the removal activity was stopped. Some of the material had already been transported to the JA Jones Pit #1 site, that prompted the BNW-80-10 Occurrence Report to be issued.

Basis for reclassification:			
Field surveys of blacktop rubble on the 305-B berm revealed contamination with a maximum reading of 1000 counts per minute. Soil at the JA Jones Pit #1 dump site had readings of less than 200 counts per minute. The final version of the Radiation Occurrence Report (BNW-80-10) states that blacktop and soil samples were collected for a laboratory counting. The blacktop had a maximum reading of 600 counts per minute natural uranium. Laboratory counting of the soil measured at less then detectable. In May 1980, all of the contaminated rubble was removed from the berm. The berm was surveyed and released from radiological controls in 1980. A follow up survey of the berm was done in August 1998 and found no detectable contamination. It is recommended this site be reclassified to No Action.
